'Home Online Tutor'

NAME	MATRIC NO.
1. WAN MUHAMMAD IZZAT BIN WAN ABD GHAPAR	1816343
2. MUHAMMAD HUSIN BIN AHMAD RUMAIZI	1813165
3. MUHAMMAD AZRUL BIN NOOR AZMI	1811839
4. TENGKU NUR IZZAH ATIRAH TENGKU MAHAMUD	1822438
5. SITI NOR AFIQAH BT MAT HASSAN	1829714

'Home Online Tutor' is a website for students who want to search for a private tutor from the available nearby location around Malaysia.

1. Group Contributions

This website, Home Online Tutor, needs several web pages to complete the full website. The pages that we include are Front page, The subject and their level which are UPSR, PT3 and SPM, Register and login, About us and contact and Payment. In the front page, the user directly can choose whether they are the student and tutor. As we have 5 members so easy for us to divide the page. A group member does one page each. However as a group, we will help each other if someone needs help.

2. Future enhancement

In project part 2, we only applied the elements that we have learned in the chapter HTML and CSS. However, we already think about what we want to upgrade in our future enhancement to make our website more attractive and clear.

For the future enhancement plan, we decide to display the list of tutor for each subject during the final presentation. For each tutor, we give the full description of their studies, teaching experience and feedback from the students and parents. Therefore, the user can book the tutor as they want so they can manage their date and time for the sessions based on availability. Thus, the students can understand the concept because we only provide the professional instructors and peer tutors to ensure they can get better results.

We also include the interaction between the system and the users. The system will display the current information or data to avoid any mistakes. It will keep on updating the latest data. Thus, it can attract the users' attention to always use our website. For example, this website surely can help the tutors to get students and students to find the best tutors for their education difficulties.

By adding storage of data for the booking page is also the planning for the website enhancement. We use sessions to store data and share such data across several pages. Usually, a user would book a tutor, and we will save the current booking along with the price and time. Then, the user would fill out a form with their personal information, and submit it. Then, the system will save it in the current session before the end of the process, which is typically the checkout page and the subsequent redirection to the payment page.

**A list of completed products (at least 8 products per page) will be displayed during the final presentation. Future enhancement shall also include interactions and storage of data for the Add-To-Cart page. Contributions are shown in Table 1.

**edit balik

Table 1 Group Contribution

Name	Contribution	Future Enhancement
Izzat		
Afiqah	- Pages: The subject and their level which are UPSR, PT3 and SPM. - Web Elements: Image, responsive tiles.	- Choose the level of studies and the subject by clicking the image. - Display the website content using responsive tiles.
Azrul	- Pages: About us and Contact us/Inquiry form. - Web Elements: Image, Form Box.	- Use javascript for more functionality such as pop-ups in contact form. - Make the page more attractive using marquee elements and javascript.
Husin	- Pages: Registration and login page. - Web Elements: Radio box, checkbox	- Store the user data from registration - Make login page usable by checking the password
Izzah	- Pages : Payment - Web element : Form Box , option select button,select button	- Make function in javascript to calculate the price - Store the price - Make the page more interesting

3. Use of third party resources

Graphics: Team members Azrul and *** obtained all graphics for the Catalogues from pexels.com, a website for high quality stock photos.

Form Builder: Team members Azrul uses the form builder to create a form in the contact us page. Modifications are documented in Table 2.

Web Elements	Team Members	Modifications
Graphics	- Azrul - Husin - Izzat - Izzah - Afiqah	All graphics are resized using CSS.
Form Builder	- Azrul - Husin - Izzat - Izzah - Afiqah	Form created using the form builder to restyle to the main page.
